ARCHITECTURAL LINE

Glos RGS

GLOS RGS is a multifunctional glass system for natural roof ventilation and lighting with high structural stability and optimal thermal efficiency.

Sun protection

Individual solution design for outdoor sun protection of buildings.

The solution is based on fixed lamellas, protection screens, or mobile sun blinds.

Ventilation center

The ventilation center is a special custom designed solution for natural ventilation in the roof, or in the floor construction.

Can be successfully used for the ventilation both of buildings and underground areas or garages.

Lamella solutions

Lamella solutions are a system with a stylish design and impressive looks, while at the same time being a lightweight structure. It is a perfect combination of form and function, with quick and easy installation and having wide possibilities for design and implementation.

Interior and exterior solutions

Perforated metal solutions

Perforated material gives unlimited opportunities for interior and exterior architectural solutions. Allowing individual custom made solutions for use both indoor and outdoor, in the areas of ventilation and facade elements, sun protection, industrial design etc.

Window and door automation

Electrical motor and pneumatic automation giving the possibility for the remote opening of doors and windows. Complex architectural solutions, related to the ventilation of the building, its fire safety and providing a comfortable microclimate in the workplace.
